The technical and support staff of the Center for Radioisotope Facilities (CRF) maintain controlled areas in compliance with the law. The CRF is responsible for monitoring the purchase of radioisotopes from the Japan Radioisotope Association (JRIA) and the transfer of radioisotope waste to that organization.

In recent years, Ms. Matsuda, Ms. Iinuma and Ms. Hayashi maintained the Myodaiji area, Ms. Sawada worked in the Yamate area, and Dr. Kodama worked in both areas.

The following are notable activities that CRF conducted in 2018:

1. Renewal of radiation worker registration forms and health check interview sheets

   In April 2018, all radiation worker registration forms and health check interview sheets were renewed. The main changes added were the ability to complete the forms in English, and a reduction in the number of forms.

2. Installation of an air-conditioner in the radioisotope storage room in the Yamate area

   Before installing the additional air-conditioner, we were running the air-conditioner across the entirety of the radiation controlled area to prevent temperature rises in the radioisotope storage room during summer. Therefore, we installed the air-conditioner in the radioisotope storage room, stopped using the air-conditioner in the radiation controlled area when it is unnecessary, and thus were able to reduce costs by doing so. The dew condensation water generated from the air-conditioner is drained to the sink in the radioisotope storage room as it may be contaminated with radioisotopes.

The number of registrants and the number of users at our facility from January 2018 to December 2018 are shown in Table 1. Users and visitors counted by the access control system in the controlled areas numbered 1,123 during this period. The numbers for each area are shown in Table 2. The annual changes concerning registrants and the number of totals per fiscal year are shown in Figure 2. The balance of radioisotopes received and used at the CRF is shown in Table 3. The total of radioisotopes received has decreased further to a greater degree when compared to last year, and the number of radioisotopes received only amounted to 1 at the Myodaiji-area and 7 at the Yamate area. The figures for training courses on radioisotope handling are provided in Table 4.
